Kelas : F – Pengkodean dan Pemrograman

TUGAS PERTEMUAN 2

Latihan JavaScript W3School

The screenshot shows the W3Schools Tryit Editor interface. The left pane contains the following HTML and JavaScript code:

```
<!DOCTYPE html>
<html>
<body>

<h2>What Can JavaScript Do?</h2>

<p>JavaScript can change HTML attribute values.</p>

<p>In this case JavaScript changes the value of the src (source) attribute of
an image.</p>

<button onclick="document.getElementById('myImage').src='pic_bulbon.gif'">Turn
on the light</button>

<button
onclick="document.getElementById('myImage').src='pic_bulboff.gif'">Turn off
the light</button>

</body>
</html>
```

The right pane displays the rendered output titled "What Can JavaScript Do?". It includes a paragraph explaining that JavaScript can change HTML attribute values, specifically the src attribute of an image. Below the text is a yellow lightbulb image. Two buttons are present: "Turn on the light" and "Turn off the light".

The screenshot shows the Qwen AI chat interface. The chat history includes a code snippet for a button that turns off a light:

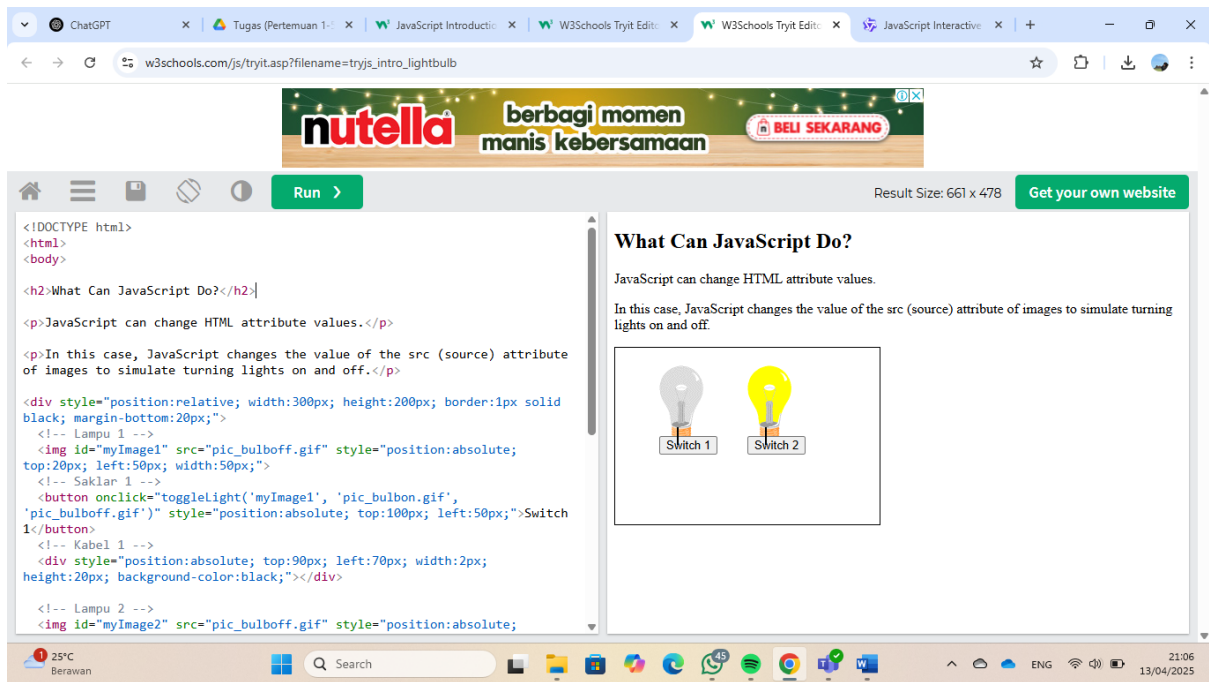

```
<button onclick="document.getElementById('myImage').src='pic_bulboff.gif'">Turn off the
light</button>

</body>
</html>
```

Below the code, the AI provides a detailed explanation in Indonesian:

edit kode ini dengan 2 bohlam, ada saklarnya, dan ada kabel yang menghubungkan (kabel dan saklat terlihat di layar) kabel terhubung di bawah bohlam dan saklar (harus terhubung dan kabel fleksibel atau lunak, jadi bentuknya bisa meliuk)

The interface also shows options for Artifacts, Image Generation, and Video Generation, and a search bar at the bottom.

Aplikasi Persediaan Sederhana
